

Moderne behandling av akillessenerupturer (ATR)

Innovativ
Dynamisk
Funksjonell

oped-international.com

Ekte equinus i ankelen

Ekte equinus i ankelen i startfasen er avgjørende for gode ATRS-resultater ved både konservativ og kirurgisk behandling. 30° plantarfleksjon i tibio-talare vinkelen sikrer at senene møtes, selv ved full belastning. Dette forhindrer forlengelse av senen og gir bedre funksjonelt resultat.^{*2 *3 *4 *6 *7}

VACOPed muliggjør full plantarfleksjon i tibio-talare vinkelen.^{*1}

Kiler fremmer fleksjon i midtfoten fremfor plantarfleksjon i ankelen, noe som gir forlengede sener og redusert funksjon.^{*1}

Tidlig progressiv rehabilitering

ROM-stangen muliggjør gradvis gjenoppretting av bevegelsesutslag under kontrollerte forhold. Den dynamiske rehabiliteringen styrker senen i tilhelingsfasen.^{*8} Dette gir dokumentert lave rerupturrater på 1–2 %.^{*2 *3 *4 *5 *6 *7}

Raskere rehabilitering og bedre resultater

Moderne behandling av akillesskader er dynamisk og funksjonell.

Med VACOPed og dokumenterte protokoller^{*4 *6 *7}, oppnås optimale ATRS-resultater og lavest mulig rerupturrisiko.

Unngå bruk av gips

VACOPeds strukturelle stabilitet og innovative liner-teknologi med full kontakt gjør den til en klinisk dokumentert gipsstabil ortose. Dermed kan den tradisjonelle underbensgipsen i equinusstilling ved behandlingsstart unngås til fordel for tidligere bruk av VACOPed.

VACOPed sparer kostnader

SMART-protokollen har dokumentert besparelser på over £91 000 per år. Med VACOPed som standardbehandling for akillessenerupturer kan sykehus redusere kostnadene ytterligere ved å senke rerupturraten til 1–2 %.

Kirurgisk behandling er ikke lenger den eneste veien til gode funksjonelle resultater. Med 30° ekte equinus etterfulgt av dynamisk behandling med VACOPed oppnås funksjonelle resultater som er på nivå med kirurgisk behandling.

Oversikt over sentrale studiedata

Rerupturrater ved konservativ behandling: Walker vs. VACOped

Resultater ved konservativ behandling med VACOped

Klinikere sparer tid med **58%** færre oppfølgingsbesøk^{*3}

Kostnadsbesparelser på over **£91.000** per år^{*4}

COCH^{*2}

Countess of Chester Hospital
n = 84 (all conservative)
y: 2023-2025
VACOped vs. Airstep® Walker
follow up: 12 months

Aintree^{*5}

Aintree University Hospital Liverpool
n = 238 (all conservative)
y: 2023-2026
VACOped
conservative treatment using SMART protocol
retrospective data analysis

BAARS^{*3}

Bradford Teaching Hospital
Acute-MSK Achilles Rupture Service
n = 128 (117 conservative)
y: 2021-2024
VACOped
conservative vs. operative treatment
follow up: 12 months

LAMP^{*6}

University Hospital
Leicester Achilles Management Protocol
n = 442 (all conservative)
y: 2019
VACOped
Follow up: 12-23 months

SMART^{*4}

Swansea Morriston Achilles Rupture Treatment
n = 273 (221 conservative)
y: 2008-2014
VACOped
conservative & operative treatment
Follow up: 9 months

East Kent^{*7}

University Hospital
n = 41 (all conservative)
y: 2019 - 2020
VACOped
conservative treatment in gaps up to 5 cm
follow up: 12 months

Studiebaserte behandlingsprotokoller

Treatment week	1	2	3	4	5	6	7	8	9	10	11	12
SMART Protocol^{*4} ATR (conservative & operative treatment)												
Equinus POP		VACOped 30°				VACOped 15°-30°		VACOped 0°-30°		VACOped 15°-30°		Wean from orthosis
LAMP Protocol^{*6} ATR (conservative & operative treatment)												
Patient seen in A&E out of hours Equinus POP		VACOped 30°			VACOped 15°-30°		VACOped 0°-30°		VACOped 0°-30°	Start using personal footwear indoors, but keep using boot outdoors		Out of boot
East Kent^{*7} University Protocol ATR (conservative & operative treatment)												
		VACOped 30° weight bearing as tolerated			VACOped 15°-30°		VACOped 0°-30°		VACOped 0°-30°	Boot removed		

Phase 1 non-weightbearing

Phase 2 weightbearing as tolerated

Phase 3 Full weightbearing

Open range of motion for joint mobility

Fixed at 90°
